DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Torrente on 1/17/2006.

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: The applicant agrees to submit a drawing similar to Figure (8) but depicting the output of the color interpolation circuit (3) as (R, G, B) color signals and being input to the gamma correction circuit (6).

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art does not teach or suggest placing a color suppression circuit in front of an RGB matrix circuit. Furthermore, the prior art does not teach the use of placing a color suppression circuit between an image pickup element and an interpolation circuit. The prior art further does not teach the suppression circuit can be provided between said color interpolation circuit and said color-difference signal forming circuit. Furthermore, the prior art does not teach the use of placing the

A/D converter for converting primary colors and complementary color signals obtained from the image pickup element before the color-suppression circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
